SUMMARY

Analytics and AI quality professional translating operational requirements into data contracts, stakeholder-ready demonstrations and validated workflows. Combines SQL/Python reporting, stakeholder collaboration and quality investigations with independent integration, reconciliation and recovery exercises in a synthetic customer environment.

TECHNICAL SKILLS

Python, SQL, pandas; FastAPI, Pydantic, REST APIs, SQLite, Git; AI/ML output evaluation, RAG/vector retrieval, deterministic agent workflows, structured outputs, human review; ETL, data validation, KPI analysis, Power BI, Tableau; requirements, root-cause analysis and stakeholder communication.

PROFESSIONAL EXPERIENCE

Apple Maps Client Engagement — Product & AI Quality Operations | Sep 2025–Present

- Validate geospatial data and AI/ML outputs against structured policy and quality rubrics; investigate incomplete sources, edge cases and recurring failure patterns.

- Support QA/QC checks, KPI monitoring and operational reporting with Python, SQL and Power BI; document findings for cross-functional partners.

- Analyze workflows, conduct quality-control reviews and support training to improve consistency. Client engagement; does not imply direct Apple employment.

Heart Hospitality LLC — Business / Operations Analyst | Jan 2024–Aug 2025

- Built Python/SQL ETL workflows and automated recurring reporting using Power BI and Excel KPI dashboards.

- Analyzed operational and customer data, built forecasting/classification models and designed relational data models to support planning.

- Gathered stakeholder requirements, documented processes and aligned analytics with business goals.

Liberated Monks Pvt. Ltd. — Data / Business Analyst | Jan 2022–Dec 2023

- Built Python/SQL ETL workflows and Tableau dashboards for acquisition, engagement and retention analysis.

- Maintained data validation rules and KPI definitions; translated cross-team requirements into analyses and evaluated segmentation models.

INDEPENDENT ENGINEERING — SYNTHETIC DEMONSTRATIONS

- Built five local simulated workflows spanning document RAG, controlled tools, authenticated loopback HTTP, CSV reconciliation and configuration/checkpoint rollback.

- Implemented operator/reviewer separation, tenant-scoped data, stable idempotency keys, durable receipts and audit trails; tested bad input, denied actions, uncertain outcomes and recovery.

- Validated 57 API/control tests, eight deterministic retrieval fixtures and five end-to-end local demos; supplied architecture, reproduction instructions and recorded execution. No production deployment or live-model quality is claimed.

EDUCATION

M.S., Business Analytics — St. Francis College | May 2025

M.Tech (Integrated), Software Engineering — Vellore Institute of Technology (VIT) | May 2023
